Geodelta deals with problems related to the environmental, land management, environmental design, and in particular concerning the geology, geotechnics, geomechanics and hydrogeology.

The Company GEODELTA - Geology and Environmental Technology consists of a professional staff and deals with problems related to the environmental, land management, environmental design, and in particular concerning the geology, geotechnics, geomechanics and hydrogeology. Members rely and work in close collaboration with a multidisciplinary team of consultants that allow GEODELTA to be competent in the field of engineering, plumbing, natural and environmental safety. In addition, the Company uses a number of external structures of trust, chemical laboratories and geotechnical, surveys' firms, drilling wells companies etc., which have been carefully selected and tested, and that offer a service to the standards of the Company . The professionalism and experience of the Members and Consultants allow us to offer services with high quality and to address most of the environmental issues, both in the field of public and private administration, using know-how gained through years of experience and knowledge of the area, especially the Venetian, supported by thousands of data (stratigraphic, hydrogeological, and environmental conditions in general) stored in our databases. The GEODELTA has professional equipment that suits every need for country instruments both in terms of software and hardware (included the most important modeling software environment, geological and hydrogeological and technical programs and land management GIS on the market).

CONSULTANTS

Marco Dal Prà
Geologist
founding partner
